

Unlock the mystery of you.

Is mental wellness a challenge for you?

Learning about your DNA can give you a better understanding of how to improve your or your child's attention and focus, reduce your cravings for things like alcohol, sugar or nicotine, and optimize your body's response to stress and anxiety.

Your DNA is like your owner's manual, providing an inside view of how your brain and body affect your health and mental wellness.

Our DNA is responsible for the way we look; such as eye and hair color. It influences our behavior and whether or not we are susceptible to complex diseases. It's also responsible for how our bodies interact with the environment - including everything from stress to our sensitivity to medications and alcohol. It even determines how well we utilize the nutrients from the food we eat.

IntellxxDNA™ Mental Wellness Report connects the dots between your DNA and your behavioral traits.

Who can benefit from the Mental Wellness Report?

Everyone! Children and adults can benefit from learning more about how their genes affect ADHD, anxiety, addiction, alcohol overuse, and obsessive tendencies.

Some of our bodies' functions can affect the way we experience mood or how we focus.

Let IntellxxDNA help identify the contributing factors to your mental wellness.

Detox: Our body's inability to remove all of the chemicals we are assaulted with in our environment including mercury, pesticides, and food additives can influence focus and overall health.

Gut: You've probably heard of Leaky Gut. The different factors that contribute to the blood-gut barrier also contribute to brain health, fatigue, pain and overall wellness.

Essential Nutrients: How our bodies absorb, carry and break down vitamins B6, B12 and D, can influence our ability to focus and how we feel. Optimizing minerals such as magnesium, zinc and copper also directly correlate with brain health.

Inflammation: Not all inflammation can be seen from the surface! Inflammation in the brain is highly associated with focus and mood.

What's in the Mental Wellness Report?

Addiction and Substance Use Disorder
ADHD Stimulant Response
Anxiety and Stress Vulnerability
Attention and Focus
Benzene, Pesticides and other Toxins
BDNF
Celiac
Choline
Copper and Zinc
Depression
Endocannabinoid
